

Breakout Session #4 – Cross-Cutting Issues
Tuesday p.m., 8 October 2013
Capacity-building

Three Streams

- **Outreach:** hooking potential new scientists, bringing information to students or the public, teaching field courses
- **Training:** teaching specific field skills to up-and-coming scientists
- **Community Integration:** establish quasi-permanent presence of providers in research hub areas and beyond (*a la* UMIAQ in Barrow)

Recommendations for RSL

- Part of RSL budget designated for capacity-building
- Logistics proposals that include capacity-building viewed favorably (additional personnel, time)
- Do not abandon NSF interest in outreach, mentoring. Keep these integrated with science.
